

QUALITATIVE TRAINING IS A GUARANTEE OF ACCIDENT-FREE WORK

Alexandr A. Lapko, Leonid F. Yanchuk (Minsk)
GAS-INSTITUTE.

Educational institution «The State Institute of qualification improvement and retraining in the field of gas supply «GAS-INSTITUTE» is the leading establishment in the Republic of Belarus of secondary adult education, training, further training and retraining working at heat-power engineering facilities, gas supply and consumption.

Since its foundation (1960), the Institute has trained more than 900000 specialists and workers which got the right to serve about 67000 explosion and gas dangerous sites and facilities of many republican enterprises. For the whole period of activities of the Institute, neither explosions nor accidents have occurred due to a fault of any of its graduates.

Currently, the Institute implements the educational principle «learning through life». More than 90 educational plans and programs are offered to our students.

The Institute's motto is «Quality education is the guarantee of security», so the special attention is given to the quality of teaching. All level tests (entry, intermediate, final) have been worked out for all the programs. The new forms of educational process have been actively and successfully implemented, some classes have been organized at the leading enterprises, and a lot of exhibitions have been visited. As per request of enterprises (our clients), we have worked out the programs on topical subjects, the training is provided directly at the customer's premises, as well as the internships are held on the basis of high energy and gas enterprises. The availability of modern equipment in the Institute enabled us to create 450 posters on various topics, 95 animations, 78 videos for training programs.

The Institute maintains business relations with industrial enterprises, scientific research organizations of Belarus and the Russian Federation, being a permanent participant and winner of national and international exhibitions. The cooperation in educational services and training in the field of gasification with the Bolivarian Republic of Venezuela, as well as other countries, still continues.

In this regard, currently the issue of the distance learning is being worked at. The development of an electronic learning system will enable to hold video-seminars, conferences and, in general, shall facilitate and make the learning process cheaper.
