ECONOMIC REGULATION OF ENSURING THE EFFICIENCY OF AGRICULTURAL PRODUCTION IN THE REGION

Chernikova Y.S., student
Scientific adviser – O.V. Mandritsa, Ph.D.,
associate professor «Economic security and audit»
North Caucasus Federal University
Stavropol, Russian Federation

The relevance of the topic under study is due to the progressive interest of the international community in addressing issues related to reducing the risks of agriculture based on various economic procedures and regulators. The agricultural production management process is characterized by a high probability of losses as a result of the influence of natural and abrupt changes in climatic conditions [1]. For to minimize risks and losses in agriculture, it is recommended to develop economic regulators at various levels of management, the purpose of which will be to reduce losses from the main factors that negatively affect the efficiency of collection harvest [2].

The study showed that the region has problems associated with agricultural risks. The solution to these problems is the state program of the Stavropol Territory, which should be aimed at the sustainable development of industries. Agriculture. State support should adequately finance such agricultural companies of the region as LLC "Vegetables of Stavropolya", LLC "Agricultural enterprise" Agroinvest ", LLC "Dolina Solna" and others. More attention should be devoted to the implementation of the cost of chemical protection and anti-hail measures, and subsidies to increase productivity in dairy farming.
